EDUCATION

Imperial College London, Britain

Jan. 2023 - Present

Ph.D. Candidate in Bioengineering and Machine Learning

- Supervised by Prof. [Guy-Bart Stan](#) and Dr. [Yiren \(Aaron\) Zhao](#)
- Funded by [BBSRC AI-4-EB\(UKRI\)](#) for Ph.D.

Wolfson College, University of Cambridge, Britain

Oct. 2019 - Oct. 2020

MPhil of Advanced Computer Science, **Distinction**

- Supervised by Prof. [Pietro Lio](#) and Prof. [Simone Teufel](#)
- Jennings Prize, 2020: They are awarded to those who with a Distinction in a University Examination

University of Nottingham, Britain

July 2015 - June 2019

BSc Hons. Data Science, Graduate with **First Class Honours**

- President's Excellence Scholarships, 2017: They are awarded to top achieving students

RESEARCH PROJECTS

Context Aware Mammalian Promoter Engineering

Jan. 2023 - Present

This project focuses on develop deep learning model for the following two goals:

- Predict transcription in mammalian cells
- Generate promoter sequences to achieve desired transcription rate

Optimising representation learning of heterogeneous cancer data [PDF]

Apr. 2020 - July 2020

Developed BIO-RGCN, an extendable framework to predict the associations between chemicals and cancers. The outputs from the model are consistent with existing medical literature.

- A demonstration of prediction results can be accessed through [Google Colab](#)

Adversarial Attack on State-of-the-art Question-Answering Systems [PDF]

Dec. 2019 - Jan. 2020

Proposed three model-independent adversaries based on the work of to attack three deep learning based question answering systems

- The output of models and adversarial examples can be found on [GitHub](#)

An exploration on the optimization routines of SVI for GPs [PDF]

Feb. 2020 - April 2020

Conducted an empirical study on different optimization routines of stochastic variational inference (SVI) for Gaussian proces (GPs)

- The code for data processing and model building can be found on [Colab Notebook](#)

WORK EXPERIENCE

Microsoft, Shanghai

Jan. 2021 - Nov. 2022

Could Solution Engineer

- Assist with developing large scale web applications on Azure Platform
- Developed and lead several projects:

- Magic Cube: a programmable virtual assistant using IoT technology, computer vision and NLP
- Bot Asistant: a rule-based conversational system for facilitating the work of engineers

Huawei, Cambridge

Sep. 2020 - Oct. 2020

Artificial Intelligence Research Intern

- Worked in Huawei Technologies Research and Development office in Cambridge
- Optimized machine learning system for speech recognition using **Beam Search** with language models

Barclays UK, Northampton

Jun. 2018 - Sep. 2018

Software engineer Intern

- Used decision tree and random forest algorithm to build Risk Model to predict **credit card delinquency**
- Developed a web application for **synchronizing the data stream** from two databases

Aarhus University, Denmark [\[Github\]](#)

Sep. 2016 - Apr. 2018

Research Assistant (remote)

- Created and managed the ComputationalLitErArY Repository, an open source corpus for old Danish language
- Wrote Script for data analysis of Old Danish language

SKILLS

Machine learning Techniques:	Train Large Models on multiple GPUs nodes, Pretrain Language Model, Attention mechanism, Machine learning with graphs
Data Science Tool Box:	Pytorch-lightning, Pytorch, Scikit-Learn, GPy, Numpy, Pandas, Jupyter, R
Biology:	Network Biology, Brains Science, Psychology for drug use
Software & Tools:	Web Programming: ASP.NET, Python Django, MERN stack (MongoDB, Express, React, Node) Azure: App Service, Networking, Firewall, Cognitive Services, Bot Framework Computing: GPU Cluster, Linux, Windows Server
Programming Languages:	Python, Java, Javascript, C#, C, Shell

INTERESTING PROJECTS AND EXPERIENCE

Smoother robot control with the variants of A* planning algorithm [\[PDF\]](#)

Apr. 2020 - May 2020

Proposed variants of A algorithms in order to create more predictable paths with a lower cost than sampling algorithms and potential field methods for the mobile robot*

- The code for the planning algorithm can be found on [Github](#)

Consistency theorem for clustering [\[PDF\]](#)[\[Poster\]](#)

Jan. 2019 - Apr. 2019

Studied the mathematical properties of unsupervised learning (clustering) algorithms. It reviews Kleinberg's work and propose a new property called partial consistency to describe the clustering algorithms as a whole.

Self-driving Car simulator using Reinforcement Learning [\[Github\]](#)

Oct. 2017 - Feb. 2018

used Reinforcement learning algorithm to train the car to avoid the obstacles

Korea University, Seoul

Jun. 2016 - Aug. 2016

Summer exchange student with scholarship

- Studied the following courses:

- Brain Science
- Calculus I & II

Aarhus University, Denmark

Jun. 2015 - Aug. 2015

Summer exchange student with scholarship

- Studied the following courses:

- Youth, Drugs and the Night-Time Economy (Psychology module) and
- Text Mining the Great Unread
